Regional Overview of Food Security and Nutrition in the Near East and North Africa 2019 : rethinking food systems for healthy diets and improved nutrition, 2020.

According to this year's report, despite encouraging trends, the food security and nutrition status of the population remains dire for many countries in the region. Some 55 million people are still affected by hunger and reversing this will require governments to rethink agricultural, health and trade policy. (FAO)

The State of Food Security and Nutrition in the World 2020 : transforming food systems for affordable healthy diets, 2020.

The number of people affected by hunger globally has been rising since 2014. This report spotlights the links between food security and nutrition, introduces new analysis of the affordability of healthy diets, presents health and climate-change costs associated with food consumption and concludes by discussing policies and strategies to transform food systems. (FAO)

Regional analysis of the nationally determined contributions in the Pacific : gaps and opportunities in the agriculture and land use sectors, 2020.

The main objective of this report is to provide a synthesis of the climate change mitigation and adaptation priorities in the agriculture and land use sectors set forth in the Nationally Determined Contributions (NDCs) of countries in the Pacific and to identify opportunities for governments to strengthen their sectoral mitigation and adaptation ambitions, capture synergies and accelerate progress on the sustainable development agenda. Towards sustainable crop pollination services : measures at field, farm and landscape scales, 2020.

As the discipline of pollination ecology moves from describing the extent of a pollinator crisis, to identifying what can be done about it, there is a need to share and highlight very practical measures that will support sustainable crop biotic pollination services. Identifying these practices will require a mix of farmer and natural historian knowledge and scientific research. In this publication, we will outline the practices that have been so far identified, and what experiences may contribute to sharing the effectiveness of these measures under different circumstances. The global action for Fall Armyworm control : action framework 2020-2022 : working together to tame the global threat, 2020.

A plant pest originating in the tropical and subtropical regions of the Americas, the fall armyworm has rapidly spread around Africa, Asia and Oceania. As it threatens food security and millions of livelihoods, FAO's new initiative plans to mobilize USD 500 million to strengthen monitoring and pest control. (FAO)

The State of World Fisheries and Aquaculture 2020 : sustainability in action, 2020.

The 2020 edition of The State of World Fisheries and Aquaculture has a particular focus on sustainability. This reflects a number of specific considerations. First, 2020 marks the twenty-fifth anniversary of the Code of Conduct for Responsible Fisheries (the Code). Second, several Sustainable Development Goal indicators mature in 2020. Third, FAO hosted the International Symposium on Fisheries Sustainability in late 2019, and fourth, 2020 sees the finalization of specific FAO guidelines on sustainable aquaculture growth, and on social sustainability along value chains.
