Developing gender-sensitive value chains : guidelines for practitioners, 2018.

Building on FAO's comparative advantage on gender in agriculture and food security, these guidelines are primarily intended to assist practitioners in designing and implementing interventions that provide women and men with equal opportunities to benefit from agrifood value chain development. They offer practical tools and examples of successful approaches to foster a more systematic integration of gender equality dimensions in value chain interventions in the agricultural sector and enhance the social impact of these interventions. Gender mainstreaming and climate resilience in Zambia's cashew sector: Insights for adaptation, 2020.

This case study documents insights on gender mainstreaming practices implemented in a large-scale agriculture development project with a climate change adaptation component in Western Province, Zambia. It describes the key gender issues in the project context, as well as the gender mainstreaming practices that are in place and have potential for scaling up. Recommendations for policymakers indicate a way forward to enhance the promotion of gender equality in the context of adaptation to climate change impacts on agriculture. (FAO)

Status of seed legislation and policies in the Asia-Pacific region, 2020.

The vast majority of the world's food crops are annuals that are grown from seed sown at the start of each production season. The quality of that seed is a key determinant of production. Farmers cannot easily observe the quality or identity of seed at the point of sale, which creates a risk on the part of the farmer. With the development of the commercial seed trade and the increasing number of varieties during the 20th century it became important to reduce this risk. This led to the formulation of laws and regulations intended to protect farmers and increase agricultural productivity through the adoption of modern varieties. (FAO)

ABS Elements : elements to facilitate domestic implementation of access and benefit-sharing for different subsectors of genetic resources for food and agriculture : with explanatory notes, 2019.

This publication contains the original ABS Elements as well as the explanatory notes describing, within the context of the ABS Elements, the distinctive features and specific practices of the different subsectors of GRFA. The explanatory notes were welcomed by the Commission and the FAO Conference in 2019. (FAO)

Report of the FAO Expert Working Group Meeting Scoping Exercise to Increase the Understanding of Risks of Antimicrobial Resistance (AMR) in Aquaculture, Palermo, Italy, 26-29 November 2018, 2020.

A risk profiling exercise was conducted on two bacterial pathogen groups (*Streptococcus* spp. and *Vibrio parahaemolyticus*) selected based on their importance to fish health and public health. Both bacterial agents affect tilapia, the second largest species group produced in aquaculture globally, which contributes significantly to global food and nutrition security. (FAO)
