Africa – Regional Overview of Food Security and Nutrition 2021 : statistics and trends, 2021.

The most recent estimates show that 281.6 million people on the continent, over one-fifth of the population, faced hunger in 2020, which is 46.3 million more than in 2019. This deterioration continues a trend that started in 2014, after a prolonged period of improving food security. In addition to hunger, millions of Africans suffer from widespread micronutrient deficiencies, while overweight and obesity are already significant public health concerns in many countries. Progress towards achieving the global nutrition targets by 2030 remains unacceptably slow. (FAO)

Asia and the Pacific – Regional Overview of Food Security and Nutrition 2021 : statistics and trends, 2021.

The pre-existing food security and nutrition situation in Asia and the Pacific in 2019 was already quite discouraging. Progress had stalled in reducing the number of undernourished, and the prevalence of certain nutritional indicators, such as stunting in children under five years of age, was much too high. Since then, the situation has worsened. While it is not yet possible to fully quantify the impact of the COVID-19 pandemic in 2020, clearly it has had a serious impact across the region. (FAO)

Europe and Central Asia : Regional Overview of Food Security and Nutrition 2021 : statistics and trends, 2021.

The first major conclusion is that the subregions (such as the Caucasus and Central Asia) and countries that were already vulnerable before the pandemic became even more so in 2020. The resilience of the Europe and Central Asia region relies mostly on the provision of solid effort in the vulnerable subregions. The second major conclusion is that, although the region was doing better than the world in 2020 in some indicators, there is still an enormous amount of work ahead to achieve the Sustainable Development Goals. (FAO)

Hunger Hotspots : FAO-WFP early warnings on acute food insecurity : August to November 2021 outlook, 2021.

The United Nations General Assembly proclaimed 2020 as the International Year of Plant Health (IYPH) to raise global awareness on how protecting plants from pests and diseases can help end hunger, reduce poverty, protect the environment, and boost economic development. The IYPH final report presents the key outcomes and achievements of the Year, and highlights its main legacies. (FAO)

Near East and North Africa – Regional Overview of Food Security and Nutrition 2020 : enhancing resilience of food systems in the Arab States, 2021.

This report notes that nearly 137 million people in the region did not have regular access to sufficient, safe and nutritious food in 2019. Proposed policy directions to strengthen food systems include diversifying trade partners and improving local logistics. (FAO)

Near East and North Africa – Regional Overview of Food Security and Nutrition 2021 : statistics and trends, 2021.

Data presented in this report show that the Arab States face significant challenges in achieving both SDG target 2.1, ensuring regular access to sufficient, safe and nutritious food for all people, and SDG target 2.2, ending all forms of malnutrition. Previous

editions highlighted the fact that the region had been off track to achieve hunger and nutrition-related SDG targets even before the COVID-19 pandemic. While it is still too early to assess precisely the impact of the COVID-19 pandemic on nutrition, the deteriorating food security situation suggests that a greater number of people face difficulties in accessing a healthy diet, which will have negative implications for their nutritional status. (FAO)

Mountain tourism – towards a more sustainable path, 2021.

This study highlights the important role that tourism can play in valuing the natural and spiritual heritage of mountains, and the cultural diversity and traditional practices of mountain peoples. Particularly when linked to nature and rural tourism, mountain tourism can make a valuable contribution to promoting sustainable food systems and adding value to local products. (FAO)

Assessment of agricultural plastics and their sustainability : a call for action, 2021.

This report presents the results of a study on agricultural plastic products used globally in a range of different value chains. The study assessed the types and quantities of plastic products, their benefits and trade-offs. Sustainable alternative products or practices were identified for products assessed as having high potential to cause harm to human and ecosystem health or having poor end-of-life management. (FAO)

The State of the World's Land and Water Resources for Food and Agriculture : systems at breaking point : synthesis report, 2021.

SOLAW 2021 highlights the major risks and trends related to land and water and presents means of resolving competition among users and generating multiple benefits for people and the environment. The DPSIR framework was followed in order to identify the Drivers, Pressures, Status, Impact and Responses. SOLAW 2021 provides an update of the knowledge base and presents a suite of responses and actions to inform decision-makers in the public, private, and civil sectors for a transformation from degradation and vulnerability toward sustainability and resilience. Conducting After Action Reviews for animal health emergencies, 2022.

This AAR manual outlines current practices for organizational learning and how they can be applied in the context of animal health emergencies. It details the steps to perform an animal health emergency AAR and leads readers through designing, preparing, conducting and reporting on an AAR. Veterinary services and competent authorities responsible for managing the response to animal health emergencies can apply the principles discussed in this manual to AARs at the country level – or in other settings such as producer organizations, multicountry regional commissions or international organizations. Overview of land degradation neutrality (LDN) in Europe and Central Asia, 2022.

Based on an analysis of LDN data for 17 countries, this report argues that restoring degraded land is vital for countries to achieve multiple national and international objectives on mitigating climate change. Key recommendations include strengthening institutional capacity and national resources governance. (FAO)
