Science and technology governance and ethics : a global perspective from Europe, India and China, 2015.

The analysis is undertaken against the backdrop of different value systems and varying levels of public perception of risks and benefits. The book introduces a common analytical framework for the comparative discussion of ethics at the international level. The authors offer policy recommendations for effective collaboration among the three regions, to promote responsible governance in science and technology and a common analytical perspective in ethics. Finance for Food : towards new agricultural and rural finance, 2014.

The growing private investment in African agriculture proves that land and water are valuable assets, especially in these times of high commodity prices. In view of the challenges, this trend is welcome in spite of some undesirable cases of land grabbing. Agriculture and rural infrastructure had been suffering over years from under-investment, especially in Africa, and cannot be developed with public funds alone. (*Preface*)

Food price volatility and its implications for food security and policy, 2016.

Price volatility is an intrinsically market-related economic concept. The economics of this book is, however, carefully embedded into the political, agricultural, climate, and nutritional domains. This makes the book an important contribution for the ongoing political agenda of the international community to reduce undernutrition and enhance food and nutrition security. (*ifpri.info*)

Rakopoulos, Theodoro. From clans to co-ops : confiscated Mafia land in Sicily, 2018.

From Clans to Co-ops explores the social, political, and economic relations that enable the constitution of cooperatives operating on land confiscated from mafiosi in Sicily, a project that the state hails as arguably the greatest symbolic victory over the mafia in Italian history. Rakopoulos's ethnographic focus is on access to resources, divisions of labor, ideologies of community and food, and the material changes that cooperatives bring to people's lives in terms of kinship, work and land management. The book contributes to broader debates about cooperativism, how labor might be salvaged from market fundamentalism, and to emergent discourses about the human economy. (*berghahnbooks.com*)

Agricultural implications of the Fukushima nuclear accident, 2013.

Although more than 80 percent of the damaged areas are related to agriculture, in situ information specifically for agriculture is scarce. This book provides data on the actual movement and accumulation of radioactivity in the ecological system – for example, whether mountain debris can cause secondary contamination, under what conditions plants accumulate radioactive cesium in their edible parts, and how radioactivity is transferred from hay to milk. Contextualizing disaster, 2016.

Contextualizing Disaster offers a comparative analysis of six recent highly visible disasters and several slow-burning, hidden, crises that include typhoons, tsunamis, earthquakes, chemical spills and the unfolding consequences of rising seas and climate change. The book argues that, while disasters are increasingly represented by the media as unique, exceptional, newsworthy events, it is a mistake to think of disasters as isolated or discrete occurrences. Reay, Dave. Climate-smart food, 2019.

Climate change poses a severe and growing threat to food security around the world. Our food is also a major driver of climate change. Here we provide an overview of these intertwined global challenges and the current state of progress (or lack thereof) in addressing them. We introduce the concept of climate-smart food, whereby climate resilience and productivity are increased while

greenhouse gas emissions are simultaneously reduced. Finally, we map out the specific foods to be explored in-depth, from farm, vineyard or ocean to Scottish dinner table. (*springer.com*)

Food anxiety in globalising Vietnam, 2019.

This edited volume further focuses on the body's feeding stage, following how sexual norms, dietary taboos, power structures, and social differentiation shape people's ambivalent attitudes toward food. It reveals the trajectories of agricultural modernization in Vietnam, against which consumers and producers are maneuvering among food independence, security and abundance.
